# HomeWorks QSX Processor

The HomeWorks QSX processor [1] provides control and communication to HomeWorks system components.

The Ethernet links allow communication to the HomeWorks designer software, integration with third-party systems and communication between multiple processors. HomeWorks QSX processors may be connected using either an Ethernet hub/switch or router, or by using Ethernet directly from a PC to the processor(s). Clear Connect - Type X Gateways cannot be wired directly to the Ethernet port on a HomeWorks QSX processor. See page 5 for details. All processors on a project must be connected to a single network. The HomeWorks designer software and all integration equipment must be connected to the same network as the processors. The HomeWorks QSX processor is required when using the Clear Connect - Type X Gateway for control of residential Ketra light sources. See Lutron Spec Submittal 3691128 at www.lutron.com for the complete details on Clear Connect - Type X Gateway.

The processor is powered from the QSPS-DH-1-75-H power supply. Refer to the HomeWorks designer software to determine link power requirements.

The QSX processor can be installed in a HQ-LV21, L-LV21, L-LV14, or PDx control panel.

Processor Capabilities

Each QSX processor has 1 or 2 links (depending on model number) that can be individually configured as one of two types:

- HomeWorks QS wired device link
  99 devices / 512 zones

- HomeWorks Clear Connect - Type A
  99 devices / 100 zones

Model Numbers

HQP7-1	HomeWorks QSX 1-link processor [1]
HQP7-2	HomeWorks QSX 2-link processor [1]
HQP7-MDU-1	HomeWorks QSX 1-link MDU processor [1,2]
HQP7-MDU-2	HomeWorks QSX 2-link MDU processor [1,2]

1 The HomeWorks QSX processor requires Lutron Designer software 16.x or greater to operate.

2 Only available for multi-dwelling unit projects. Contact your local dealer or Lutron representative for more information.

HomeWorks QSX Processor

Specifications

Model Number	HQP7-1; HQP7-2; HQP7-MDU-1; HQP7-MDU-2
Power	Processor (P): 24–36 V⎓ 250 mA Links (L1 / L2): 24–36 V⎓ 2 A per link
Typical Power Consumption	4.2 W; 8 Power Draw Units (PDUs) Test conditions: Two Ethernet links connected, both device links in use
Regulatory Approvals	cULus, NOM, CE
Environment	Indoor use only. 32 °F to 104 °F (0 °C to 40 °C), 0% to 90% humidity, non-condensing
Heat Generated	15 BTU/hr — typical (24 BTU/hr with 2 links at 2 A each output)
Cooling Method	Passive Cooling
Power Failure Memory	System data stored in non-volatile memory. Timeclock retention for 10 years
Internal Timeclock	±1 minute per year
Miswire Protection	All terminal block inputs are over-voltage and miswire protected against wire reversals and shorts
Low-Voltage Link Wire Type	Two pair — one pair 18 AWG (0.75 mm^2), one pair 18 to 22 AWG (0.34 to 0.75 mm^2) twisted shielded — IEC PELV / NEC® Class 2 cable
Low-Voltage Power Wire Type	18 AWG (0.75 mm^2)
Communications	Ethernet, RS485 (QS, RF)
Link Capacities	HomeWorks QS Wired Device Link 99 devices/512 zones HomeWorks QS Wired Device (MDU models) 50 devices/50 zones HomeWorks Clear Connect - Type A Link 99 devices/100 zones
ESD Protection	Meets or exceeds the IEC 61000-4-2 standard
Surge Protection	Meets or exceeds ANSI/IEEE C62.41 standard
Mounting	Mounts in HQ-LV21, L-LV14, L-LV21, or PDx- control panel
Dimensions	With terminal blocks: 4.25 in (108 mm) x 3.94 in (100 mm) Without terminal blocks: 4.25 in (108 mm) x 3.54 in (90 mm)
Connections	4-pin removable terminal blocks. 1 for HQP7-1, 2 for HQP7-2. One 4-pin removable terminal block* for Power Input. Two RJ45 standard Ethernet connections. *Each terminal will accept up to two 18 AWG (0.75 mm^2) wires.
Warranty	www.lutron.com/TechnicalDocumentLibrary/Warranty.pdf

HomeWorks QSX Processor

HomeWorks QSX System Security Statement

Lutron takes cybersecurity very seriously. We actively monitor the threat landscape and take a proactive approach to security and privacy, continuously working to update and enhance our systems and processes.

At Lutron, we call our approach to cybersecurity **"Secure Lifecycle"**, and we would like to present the following steps we take to protect your security and privacy:

- **Security by Design.** When building a new system, Lutron utilizes a dedicated security team to ensure best practices are implemented. Security is built in. It is not an afterthought or an add-on.

- **Third-Party Validation.** Security is complicated. Lutron has a dedicated team of internal experts, but we also leverage external experts to double-check our work, and to make security recommendations.

- **Continuous Monitoring and Improvements.** Security is a constantly moving target. Lutron uses a dedicated security team to continuously monitor for potential threats and, when needed, send out security patches to update installed systems.

- **Ongoing Support.** Lutron has the resources you need to answer questions about security when they arise.

We incorporate a variety of security features into our product designs. These features include recommendations from the National Institute of Standards and Technology (NIST) among others, and they are aimed at meeting our secure lifecycle protections. While we do not publish a comprehensive list of our security features, the following list is a small example of some of the techniques employed in our system designs for HomeWorks QSX processors, Clear Connect Gateway – Type X devices and associated services (such as mobile applications and cloud resources):

1. Secure and authenticated remote access with unique keys for every HomeWorks QSX system.

2. A secure hardware element ("chip") on all HomeWorks QSX processors and Clear Connect – Type X Gateway to guard the keys used for secure communication and authentication.

3. Enforcing industry-standard encrypted communication and techniques for our integration protocols to the highest extent possible. Any integrated third-party components or systems should be evaluated independently.

4. Secure commissioning – all communication between the system programming software tool/app and the processors is encrypted and authenticated. Programming a system requires permission to access that system.

5. Security updates are pushed out automatically to the lighting system for urgent security patches. Lutron is committed to one year of security support from system start-up date.

6. Use of industry-standard techniques for cloud-based integrations, such as OAuth2.0.

7. Signed processor firmware to ensure a firmware update is authentically from Lutron.
If you have additional questions or would like to make a vulnerability disclosure to Lutron, please contact Lutron's 24/7 Technical support Line at 1.844.LUTRON1 or visit us at support@lutron.com
